# **Program Outcomes of Geography**

## **Program Outcome of Geography:-**

- ❖ The curriculum for various programmes in Geography is comprehensive and coherent, infusing a holistic understanding of the subject. Students not only gain knowledge of two broad branches of Geography i.e. Physical Geography and Human Geography, but also of other specialized branches and fields of the subject. Students comprehend the scope and evolution of the diverse fields of Geography as well as the niche of Geography vis-a-vis other social and earth sciences.
- ❖ In-depth knowledge of Geographical concepts, theories and contemporary development are instrumental in infusing the practical and analytical expertise. Students get an opportunity of experiential learning in the subject, while learning the techniques of surveying and mapping. Observation skills of students are further refined through field surveys.
- ❖ For those who want to pursue research, the course content for Honours and Post Graduate Courses in Geography incorporate specialistic branches such as Statistical Methods in Geography, Evolution of Geographical Thought and Methodology, Quantitative Techniques in Geography, Regional Planning, Remote Sensing and GIS.
- ❖ Geography as a stream forms the back-bone of General awareness and equips the scholars for various competitive examinations of RPSC and UPSC. Geography as a stream, provides ample job opportunities to students in Government Departments and private sector.

- ❖ These courses will also prepare students for UGC NET/SET exams. Students of Geography can become Teachers, Professors, Cartographers, Surveyors, Town Planners, Researchers, Environmentalists, RS-GIS Specialists, Climatologists, Regional Planners etc.

### **Program specific outcomes:**

- ❖ Physical Geography engraves an understanding about the Earth's natural features, elements, processes, along with the various phenomena of Earth's lithosphere, atmosphere, hydrosphere and biosphere.
- ❖ Human Geography focuses and equips the students with an analytical perspective of anthropogenic environments along with the socio-cultural-political and economic aspects of human development.
- ❖ Geography also imparts factual conceptual and procedural knowledge of the plethora of interactions of the living world with their environment and the way different places, locations and their physical attributes can have an impact on organisms and human development.
- ❖ A student pursuing the Master's program in Geography seeks to understand various geographical features and elements, their significance and their spatial and temporal evolution and development. Thus, Geography enables the study of changes in spatial attributes in a temporal perspective.

- ❖ Geographical study also incorporates the understanding of various natural, socio-cultural-political and economic processes, phenomena and the driving forces which affect and bring change in living and nonliving components of the Earth.
